OBJECTIVE

To maintain and advance my career in software engineering by contributing to diverse open-source or enterprise projects, leveraging my web and mobile development experience to build practical, innovative, and highly efficient solutions.

PROFESSIONAL EXPERIENCE

CI&T | Full Stack Web Developer

10/2025 - Present

- Part of a cross-functional team responsible for driving the architectural transformation of the Bradesco Seguros app (millions of monthly users), transitioning from a monolith to MFEs (micro-frontends) as part of the SuperApp initiative.
- Led the dependency upgrade process for the Bradesco Seguros App, migrating Angular 16 directly to Angular 20.
- Directly responsible for decoupling all application verticals, leading a massive Pull Request with over 2,000 modifications to enable independent vertical development in isolated libraries.
- Implemented Monorepos (mini-apps) using Angular and Nx, creating development platforms for continuous product improvement where verticals are consumed as libraries by the SuperApp, paving the way for future MFE migration.
- Developed custom AI coding agents for GitHub Copilot and Claude Code, boosting team productivity by nearly 10x and reducing decoupling task time from 2 weeks down to just 2 to 3 days.
- Developed and maintained automated tests as an integral part of contribution guidelines across GitHub and Bitbucket repositories.
- Participated in the initial implementation and monitoring of MFEs (micro-frontends) deployed on Amazon S3.
- Acquired hands-on experience implementing extensive, complex quality gates and CI/CD pipelines in GitHub Actions, utilizing tools like SonarQube, Fortify, and Gitleaks.
- Maintained local BFFs (Backend-for-Frontend) built with NestJS.
- Worked in an Agile environment using Jira as the primary tool for task and project management.
- Participated in code reviews, promoting clean code principles and development best practices.

Moka IoT | Full Stack Web Developer

02/2023 - 10/2025

- Technically led a 3-person team to develop the new "Moka Web" from scratch, using modern technologies and a modular-monolithic architecture built on reactivity best practices.
- Developed backend applications using microservices, monolithic, and modular-monolithic architectures.
- Utilized Figma to access UI/UX designs, consult development requirements, and collaborate on layout improvements.
- Developed and maintained hybrid mobile applications (Android and iOS), managing deployments on the Play Store and App Store.
- Implemented CI/CD pipelines for multiple backend and frontend projects.
- Participated in code reviews on GitHub.

Tamborine Tecnologias | Backend Developer

09/2021 - 01/2023

- Participated in scope planning for an MVP mobile application, mapping business requirements.
- Developed backend features for a monolithic core system, writing automated tests with Node, Express, MongoDB, and Node Tap.
- Packaged and delivered backend updates as internal NPM dependencies for other ecosystem applications and services.
- Developed RESTful API features with Fastify and Ajv JSON Schema Validator, documenting endpoints via Swagger.
- Created a Node.js module for AWS SNS-based Push Notifications and SMS delivery supporting Android and iOS.
- Conducted code reviews for the backend team via GitHub Pull Requests to maintain high code quality.

Moka IoT | Software Development Intern & Web Developer

01/2019 - 08/2021

- Developed and maintained interactive dashboards for the company's main web application using Angular 6.
- Maintained the legacy core mobile application built with Ionic 3 and managed Apple App Store and Google Play Store deployments.
- Responsible for the initial design and development of two new mobile projects using modern development platforms to replace legacy applications.
- Maintained and developed features in event-driven backend systems built with Node.js callback patterns.

TECHNICAL SKILLS

Methodologies:	Scrum, Kanban.
Databases:	MongoDB, MySQL, PostgreSQL, Redis.
Frontend:	Angular 2+, Angular Material, Ng Bootstrap, Nebular Dashboards, PrimeNG, RxJS, NgRx, Chart.js, Apache ECharts, Tailwind CSS, SCSS, Ionic, Capacitor, Webpack Module Federation, Nx Monorepos.
Backend:	Node.js, JavaScript, TypeScript, Express, Fastify, NestJS, Swagger, ApiDocs, JSON Schema (Draft v7), Socket.io.
Design & Tooling:	Figma, GIMP, VS Code, WebStorm, Postman, Xcode, Android Studio, Angular DevTools, Insomnia, Claude Code, GitHub Copilot.
Cloud & DevOps:	AWS (SNS, S3), Firebase, Docker, GitLab CI/CD, GitHub Actions.
Management:	Jira, Trello, GitHub Projects, GitLab Boards.
Operating Systems:	macOS, Windows, Linux (Manjaro, Ubuntu).

EDUCATION & CERTIFICATIONS

MongoDB Associate Developer Certification — MongoDB University	2024
Bachelor of Science in Computer Science — Federal University of Lavras (UFLA)	2016 – 2020

ADDITIONAL INFORMATION

- Open to all work arrangements: Remote, Hybrid, or On-site.
- Fully available for relocation if required.
